bondata

NEXT-GEN MASTER DATA MANAGEMENT

YOUR AI IS BRILLIANT. IT JUST CAN'T SEE YOUR DATA.

Claude, Copilot, and ChatGPT can't query your ERP, so they can't be your system of record. **BonData fixes both.**

GREAT ASSISTANT. WRONG DATA.

The intelligence isn't the problem. The access and the trust are.

General assistants have never seen your ERP ,PLM ,MES, or CRM. And even connected, an LLM is **non-deterministic**: brilliant for a draft, unsafe as a system of record.

60%
of AI projects abandoned in 2026 without AI-ready data
Gartner, 2025

80%+
of AI projects fail, roughly 2x the non-AI IT rate
RAND, 2024

$3T / yr
the cost of bad data to the U.S. economy
IBM estimate, via HBR

THE DIFFERENCE, SIDE BY SIDE

	General AI Claude · ChatGPT · Copilot · Gemini	BonData Next-Gen MDM. built for your data
Sees your ERP / PLM / MES / CRM	✗ Never connected	✓ 100+ live connectors
Answers with your real numbers	✗ Public data, can't check yours	✓ Live query, verified figures
Trusted as a system of record	✗ Hallucinations "often inevitable"	✓ Deterministic, governed Golden Record
One trusted view of customer & product	✗ You paste fragments	✓ Golden Record, deduped & resolved
Reads Excel, EDI & PDFs as-is	✗ Manual copy-paste	✓ Ingested automatically
Can fix data or trigger a workflow	✗ Text only	✓ Acts on the record
Where your data lives	✗ You copy or upload it out	✓ Zero-copy, never leaves your systems

BonData runs on Claude/GPT/Gemini under the hood. It is the layer that points them at your data: ***complementary, not competing****. A raw LLM is a powerful feature. It is not a foundation.*

How BonData makes your AI useful on your data

MDM, out of the box

Entity resolution, dedupes and records resolving across every system - into one Golden Record.

Federated live chat

Ask in plain English; one query spans your live systems and returns numbers you can trust.

Live in 24 hours

On connect, BonData learns your tables, terms, and metrics. Not a 6-to-18-month program.
