bondata

YOUR ORGANIZATIONAL CONTEXT INTELLIGENCE LAYER

The Problem

Data fragmentation (silos) and lack of context are the primary roadblocks for AI adoption. Traditional AI-agents fail to deliver value because they can't autonomously connect the dots across these fragmented systems and 'understand' the data (context), leaving teams with raw data that lacks meaning.

The Solution

BonData serves as **your Organizational Context Intelligence Layer**, unifying your entire business ecosystem into a **single, high-fidelity interface, in 24 hours**. Our **"Zero Data Movement"** architecture allows you to map organizational context without requiring data migration. This approach completely changes the way you (and AI Agents) interact with your data, enabling faster, more accurate resolutions.

Key Benefits

AI Context

Provide the meaning needed for AI to understand your unique business rules, ensuring agents and your team act with full enterprise intelligence.

Zero Data Movement

Map your ecosystem without the risk, cost, or compliance hurdles of traditional data centralization.

Eliminate "Data Debt"

Autonomously harmonize fragmented silos and resolve the systemic debt of manual data cleaning to establish a definitive Organizational Brain

Autonomous Entity Resolution

Automatically reconcile mismatched records across systems without needing a pre-existing data glossary or manual primary keys.

Typical workflows

Root-Cause Analysis
Enable teams to instantly investigate manufacturing performance outliers or irregularities easily

Centralized Golden Records
Consolidate fragmented supplier or customer data to uncover bulk purchasing opportunities cross-organization

Talk to Your Data
Empower teams to ask questions and drive actions based on your organizational brain, using natural language

How it Works?

CONNECT

Connect to your legacy MES, ERP, and all "dirty" sources (Files/EDI/Excel)

HARMONIZE

The IntelliBond engine automatically resolves entities and contextualize your data

ACT

Talk to your data, gain insights, trigger workflows or create actions to solve any issue
