NEXT-GEN MASTER DATA MANAGEMENT (MDM)

One trusted Golden Record. Live in 24 hours.

BonData is next-generation MDM for operations-driven businesses. It bonds your existing ERP, CRM, and core systems into one trusted Golden Record for your products, suppliers, and customers. Live in 24 hours, with your data never leaving your systems. No pipelines, no cleanup, no rip-and-replace.

The Problem: Master Data You Can't Trust

Legacy MDM Priced You Out:

Informatica, Stibo, and SAP demand data modeling, stewardship teams, export your data and 18-month rollouts.

Human Middleware:

Teams spend up to 80% of their time cleaning and reconciling data across PDFs, Excel, and legacy systems by hand.

Cost + Risk:

Mismatched records drive duplicate payments, billing errors, and bad decisions, costing \$100k+ yearly in avoidable waste.

The Solution: MDM Without the Data Team

BonData doesn't replace your ERP, CRM, or core systems. It bonds them into one trusted Golden Record, with no data movement.

No Migration:

Keep your systems. BonData bonds the data between them.

Dirty Data Ready:

PDFs, spreadsheets, and legacy exports go in as-is.

Zero Engineering:

No data modeling, no rules, no stewardship team.

How It Works?

Connect:

Link your ERP, CRM, billing, and supplier systems, plus dirty sources like Excel and PDFs.

Harmonize:

BonData resolves entities, deduplicates records, and maps relationships across every source.

Act:

Ask, automate, and analyze on a single Golden Record. Chat with your data or trigger a workflow.
