bondata

ONE SOURCE OF THE TRUTH. IN 24 HOURS.

Harmonize disconnected apps, systems, and spreadsheets into a single, automated **Golden Record**

Your data is usually a mess of disconnected apps, siloed databases, and "shadow" spreadsheets. Fixing this requires teams to manually reconcile data in Excel. BonData changes that. We provide a **Smart Harmonization Layer** that sits on top of your existing tools. In just **24 hours**, we automate the correlation of your core records, giving you a live **Golden Record** that restores confidence in your reporting and makes you **AI-ready** today

The Problem: Why Your Data is Broken

The "Manual Mapping" Tax:
Teams waste 40% of their time manually cleaning and merging records from different systems just to get one accurate report.

Duplicate & Conflicting Data:
"Customer A" in your CRM is "Acct-123" in your billing system. These cause missed revenue, bad analytics, and operational friction.

The Unstructured Gap:
Critical business truth is often trapped in PDFs, emails, and spreadsheets that traditional software tools simply cannot read or unify.

The Solution: Your Business, Harmonized

Autonomous Entity Resolution:
BonData automatically identifies and links related records across your entire ecosystem, even if the names, IDs, or formats don't match.

Zero-Migration "Context Layer":
Don't replace your tech stack. We provide a semantic overlay that gives your current data instant integrity and cross-platform visibility.

Cross-Platform Conversational AI:
Use 'BonData Chat' to ask complex questions and get instant answers based on your unified, real-time Golden Record.

How It Works?

Connect:
Link your existing systems in minutes with zero custom coding.

Harmonize:
BonData's engine automatically cleans, de-duplicates, and maps your data into one source of truth.

Scale:
Access your Golden Record via a live dashboard or chat, or sync it back to your core business tools.
