YOUR GO-TO-DATA-PLATFORM

Eliminate “BOM Gap” & Accelerate Time-to-Volume

BonData is an **Agentic Data Platform** that connects and maps internal and external data sources, building AI capabilities organizations need to combine, analyze, and make decisions from complex, siloed datasets to solve manufacturing challenges such as **Data Synchronization, Harmonization, Data Hygiene**, and creating **Master Data File** or **Golden Record**.

The Problem: The "BOM Gap"

-  **Human Middleware:** Teams spend 30-80% of their time manually rekeying / reformatting supplier data into ERP/PLM.
-  **Outdated Revisions:** ECOs and supplier updates don't propagate fast enough, causing wrong builds and delayed pilots.
-  **Cost + Risk:** Manual data errors lead to \$100k+ in waste (on average) during 1st year of production.

The Solution: A “Surgical Wedge” for Your Data

BonData doesn't replace your ERP/PLM. It sits on top to reconcile PNs, attributes, alternates, and revisions - creating a correlation map of your “commercial truth.”

-  **No Migration:** Keep your systems; harmonize data between them.
-  **Dirty Data Ready:** Ingest messy PDFs, spreadsheets, legacy feeds automatically.
-  **Instant Quality:** Surface mismatches before the first part is cut.

How It Works?

-  **Ingest:** Connects to SQL, APIs, or flat files (PDF/Excel) without custom coding.
-  **Harmonize:** IntelliBond engine automatically maps disparate SKUs and revisions.
-  **Action:** Use BonData Chat to ask: "Which supplier delay is stalling the Pilot Run?"
